or scan the QR code to sign up now!

Why are we removing invasive vines?

- Invasive vines “choke” trees by **blocking vital nutrients & sunlight**
- The weight of invasive vines makes trees **more susceptible to breakage & collapse during storms**
- Trees are a **vital part of our urban ecosystem**, providing stormwater regulation, wildlife habitat, & shade
- Trees **add as much as \$10,000 in property value** & can even **reduce energy costs** by 20–50% by shading your home
- Trees sequester carbon! **Saving trees from invasive vines is an effective way to fight climate change!**

Questions? Contact us to have invasive vines on your property removed for free.
